Application/Control Number: 09548946

Art Unit: 2811

## Election/Restriction

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - Claims 5 and 6, drawn to a semiconductor device, classified in class 257, subclass 737
  - II. Claims 1-5, drawn to a method of making a semiconductor device, classified in class 438, subclass 613.
- 2. The inventions are distinct, each from the other because of the following reasons: Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case unpatentability of Group I invention would not necessarily imply unpatentability of the process of the group II invention, since the device of group I invention could be made by the processes different from those of group II invention. For example, performing the steps in order of: providing solder bumped die including a plurality of solder/metal bumps on front and backside of the bumped die; providing a copper clip; connecting the copper clip to the backside of the die using thermocompression; depositing the solder paste at the contacting portions of the die, copper clip and the lead frame; placing the die with the copper clip on the lead frame to contact the respective source/gate bumps; and then reflowing the solder paste and solder bumps.
